

Python code to detect alarm if temperature is high

```
import random

import digitalio
import board

temp = random.randint(20,45)

humidity = random.randint(25,50)

alarm = digitalio.DigitalInOut(board.D13)
alarm.direction = digitalio.Direction.OUTPUT

button_a = digitalio.DigitalInOut(board.BUTTON_A)
button_a.direction = digitalio.Direction.INPUT

pinValue = button_a.value

if(temp>45 || humidity<25):
    alarm.value = True
else:
    alarm.value = False
```
